

<Input>

Please modify the input as needed before using.

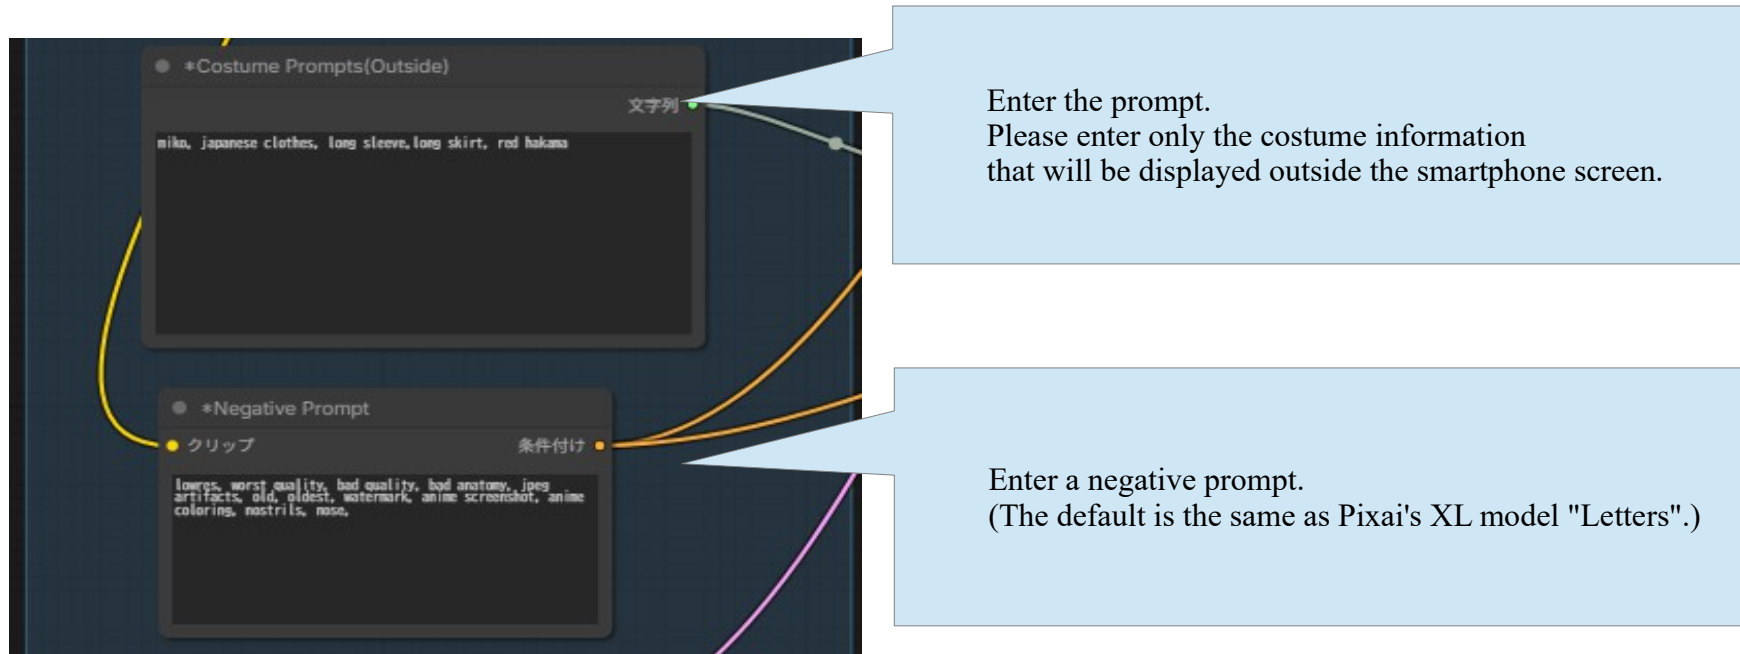

(As an example, an image of a "shrine maiden with black braided hair" is generated.)

The screenshot shows the X-ray_smartphon interface with three main input sections:
1. ***Select Model**: A dropdown menu showing 'ck ... anima_pencil-XL_safetensors' selected. A callout box points to this section, stating: 'Select the training model to use when generating images. ("anima_pencil-XL" is available by default.)'
2. ***Main Model**: A text input field containing the prompt: 'masterpiece, best quality, 1girl, black hair, twin braids, long hair, hand on own chest, smile, happy, open mouth, upper teeth only, blue eyes, blush, outdoors, japanese house, shrine, blue sky, stone floor'. A callout box points to this field, stating: 'Enter the prompt. Please describe the character's hairstyle and background. *Do not enter any information about their clothing.'
3. ***Costume Prompts(Smartphone screen)**: A text input field containing the prompt: 'completely nude, puffy nipples, pussy.'. A callout box points to this field, stating: 'Enter the prompt. Please only provide information about the costume as it appears on the smartphone screen. (nude, under wear ...)'
The interface also features a '文字列' (Text) label next to each input field and a 'モデル' (Model) label next to the dropdown menu.

Select the training model to use when generating images.
("anima_pencil-XL" is available by default.)

Enter the prompt.
Please describe the character's hairstyle and background.
***Do not enter any information about their clothing.**

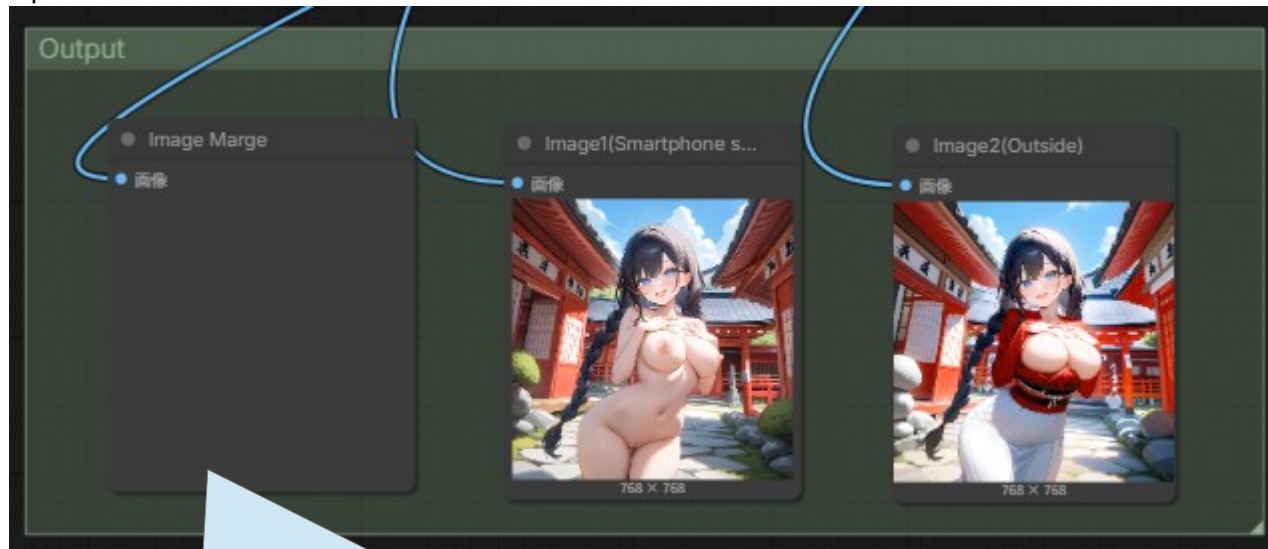

Enter the prompt.
Please only provide information
about the costume
as it appears on the smartphone screen.
(nude, under wear ...)

The screenshot shows a Node.js workflow with four main nodes: ***Image Size**, ***Smartphone Image**, ***Color(Smartphone screen)**, and ***Color(Background)**. Callouts provide instructions for each node.

- *Image Size**: Set the size of the output image. Default width: 768px, height: 768px.
- *Smartphone Image**: Upload images from your smartphone. Use an image with the background and smartphone screen colors filled in as a single solid color. **Because it uses RGB, background and smartphone screen needs to be filled with a single color.*
- *Color(Smartphone screen)**: Set the color to fill the smartphone screen. Color: #00ff00 (green).
- *Color(Background)**: Set the color to fill the background. Color: #0000ff (blue).

<Output>

The following images will be output for each.

①Image Marge

An image combining images ②, ③, and a smartphone image.

②Image1(Smartphone screen)

Test.Images created by Costume Prompts (Smartphone screen)

③Image2(Outside)

Test.Images created by Costume Prompts(Outside)
